LaMP demo: voiceover script

For the 1:54 demo film. Times are when each scene starts. Speak at an easy pace, about 150 words a minute. Say "taka" for BDT.

TIME	ON SCREEN	VOICEOVER
0:00	Title card	LaMP helps neighborhood pharmacies, and the families who buy there on credit.
0:05	PIN screen	This is Green Life Pharmacy in Bogura. The owner unlocks LaMP with a PIN.
0:10	Today	Straight away, LaMP warns that the shop will be nineteen thousand taka short on the 26th of October, the day Supplier A's sixty-thousand-taka order is due.
0:19	Scan	Most of a pharmacy's numbers live on paper. The owner snaps a supplier invoice, and AI reads every line: products, batches, expiry dates and prices. Nothing is saved until the owner checks it.
0:33	Plan	LaMP plans with the cheapest money first: order fewer of the slow seller, then ask the supplier for more days.
0:38	Plan, costs	Borrowing it all would cost 421 taka. This plan costs nothing, or 182 taka if the supplier says no.
0:43	Ask LaMP	The owner can just ask: "Can I pay Supplier A's order next week?" LaMP answers from the shop's own figures and suggests the steps. It can suggest, but it can never approve, pay or contact anyone.
1:01	Approvals	Every step waits for the owner, and loans need the PIN again. Each approval shows what it saved: over eleven thousand taka so far, mostly by not buying stock that would expire on the shelf.
1:18	Customer's phone	Families buy medicine on credit too. With the code on their slip, a customer opens their own card. No app, no PIN. They see what they owe and pick a plan that fits their week. The card shows amounts only, never names or medicines.

TIME	ON SCREEN	VOICEOVER
1:36	Customers and History	Back at the counter, the owner sees the plan right away. Every step, by the owner, LaMP or a customer, is saved in a history no one can secretly change.
1:47	End card	Try LaMP live at lamp-ai-web dot onrender dot com. The owner PIN is 2468.

Recording tips

- Record in a quiet room, phone close to your mouth, one take per row so you can redo a single line.
- Leave half a second of silence at the start and end of each line.
- Send the audio (one file, or one per row named 01.m4a, 02.m4a, …) and it can be laid onto the film at these times.
