LaMP

An AI money helper for the neighborhood pharmacy, and the families who buy there on credit

THE PROBLEM

173,500+ licensed pharmacies in Bangladesh, most run by one family. Every number lives on paper.

Each buys on credit from 10–50 companies on 10–15% margins. Green Life sold BDT 412,500 last month and kept BDT 13,500.

Expiring stock and a cash crunch before a big supplier bill mean empty shelves, so families go without medicine.

Families buy on credit too. Green Life is owed BDT 38,000, and customers have no clear way to see or plan what they owe.

The solution

Take a photo. Get a clear money picture. Ask in plain words. Approve every action yourself.

Reads paper for you

AI reads photos of supplier invoices and the sales book. The owner checks every field before it is saved.

Sees trouble early

30-day cash forecast, supplier dues and stock expiring in 60 days, with alerts before the money runs out.

Cheapest money first

Uses trapped cash and free supplier terms first, then compares loans. Demo: BDT 0, or BDT 181.97 instead of 421.64.

A card for every customer

NEW. A family opens their card with a code, sees what they owe and picks a weekly plan. Amounts only, never names or medicines.

Safe by design: LaMP reads and suggests. The owner approves every action, loans need the PIN again, and LaMP never moves money.

How it works

AI where it helps, plain math where money is involved.

1. Photo in: AI (OpenAI vision) reads invoices and sales-book pages into fields.

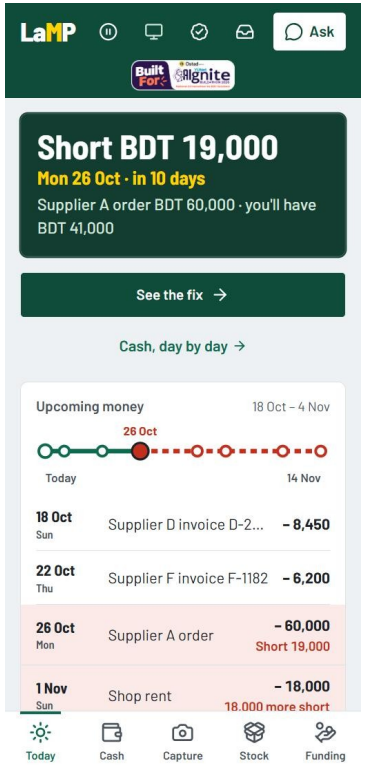

2. The owner checks and corrects. Nothing is saved without their yes.

3. Plain Python does all the money math: profit, cash forecast, expiry risk, loan costs. The AI never calculates money.

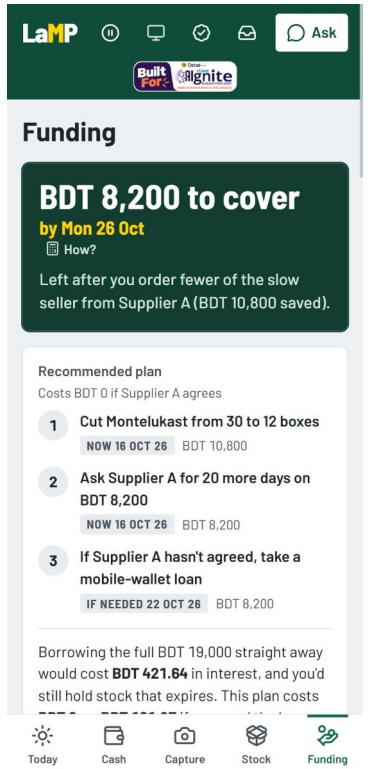

4. Ask LaMP: the chat explains the shop's own figures and suggests the next step.

5. The owner approves; customers set plans on their own card. Every step lands in a tamper-evident activity log.

WHAT'S NEW FOR AIGNITE

Started as a team prototype for FinTechathon 2026. Farhan Tahsin Khan co-built the original engines and API and agreed to this solo entry.

New for AIgnite: customer cards with weekly payment plans, a Customers page for the owner, plain wording across the app, a public link and the official sticker.

379 automated tests check every figure; the shared demo makes no paid AI calls and resets itself every hour.

Owner: PIN 2468 (Green Life Pharmacy, Bogura). Customer: tap "Check what you owe", card GL-7KQM-4XPA.

Free hosting: the first load can take up to a minute.

- Real problem: one expired batch or one needless loan wipes out a week of a family's income.
- Meaningful AI: reads paper, explains numbers in plain words, proposes the cheapest path.
- Safe by design: the owner approves everything; the AI never touches money.
